Notepad is integrated with Windows, and the Windows Store version of Sql View Diff is tied to the same sign-in used by the app. However, you can set up a new user account if you don't want your data to be visible in your colleague's instance. Price: \$0.0 File Size: 6 MB Platform: Windows 12.34 USD Simple Calculator Jordi RC4 (Win32) The Basic Calculator, written by Dragan D. Hristov and Benes. Allowing a device to display a number and ask you to do simple calculations with it, the Basic Calculator is packed in a Modern UI and takes advantage of the built-in Windows 8/8.1/10 share charm. It comes with a dark theme and a memory capacity of 8 values. Standard, trigonometrical and natural logarithms are supported, as well as round-off, to the nearest multiple of 0.1. It's also possible to use the decimal point and negative numbers and raise a number to power. Enter the number of values you want to store in memory, or click the "Set" button to have them displayed by clicking the "Get" button. If you want to clear all values in memory, click the "Clear" button. If you click the "Calculate" button, the calculator will calculate the given number's square root, natural logarithm, square root of the number, all with the current values in memory. Keyboard is supported. You can either click the buttons or press the corresponding keys on your keyboard (numpad is supported), as well as clear the last digit from the result or clear everything. Unfortunately, the calculator cannot display full expressions. There are no options implemented for recording calculator to history, saving data to file or copying it to the Clipboard. However, because the app gets integrated with the Windows share charm, you can take a screenshot and send the image to an external Modern UI program, whether you want to save it to file or share it with a friend. Decent calculator for everyday use All things considered, Basic Calculator is an elementary and advance calculator for your desktop. It's optimized for touch-supported devices. Setup Instructions: Skywalker World has been given permission to add this to the This mod makes a few changes to the npc dialog for each race's settlement. I've used information from the original Niflheim screenwriting, and also did some changes myself. The dialogue has been lowered, adjusted, and added to, and in some cases replaced by, the original npc dialog. Of course, this mod could have gone way farther, and I'd be happy to make it do so if you tell me what you want
