The WinPcap community is pleased to announce the immediate release of WinPcap 4.3.6, a free and open-source tool for packet capture. Packet capture is the process of snaring network traffic as a series of packets. It is used to examine the network traffic of your computer. Feature highlights: Improved support for more interfaces and the ability to filter packet captures by interface Support for WinPcap with the ability to use multiple instances of WinPcap simultaneously. This feature enables the use of more than one capture card, allowing several capture cards to be in use simultaneously. A new option has been added to the WinPcap configuration utility that enables a user to specify the character set to use when searching for a specific IP version. This option enables the user to search for IPv4 or IPv6 addresses when packet capture is initiated. A bug in WinPcap has been fixed that could prevent you from taking back a capture. Improvements to the WinPcap configuration utility, which now saves configuration information when a file is closed. Improvements
